

# Brown Pelican

## Description

The Brown Pelican is found in mainly coastal areas. During breeding season the skin on its throat turns a vibrant red color.

# Experiences & anecdotes

**07/3/22** - My first memorable experience with Brown Pelicans come from the [Christmas Bird Count where we counted Brown Pelicans](#). We went to Playa del Rey, CA to count the pelicans which were mostly out sitting on a jetty.

For a few months [I volunteered at International Bird Rescue](#) for a few months where I helped care for and occasionally release aquatic birds back into the wild. One part of this role was to go into the large pelican enclosure with a big net and run around scaring and bothering them. This helped prevent the birds from becoming habituated. There were all sorts of techniques used for different birds to ensure they didn't get too used to humans caring for them.

**01/12/23** - On a recent trip to South Padre Island, Texas, there were many Brown Pelicans all over the island. We visited the [Birding and Nature Center](#) and enjoyed watching the pelicans glide just above the water's surface.
